Location: San Jose, Costa Rica
 Year established: 2014
 # Employees: 10
 Annual % Exports (2016): 80%
 Markets served: Multinational
 manufacturers in Costa Rica

SERVICES

HUNT-R is a comprehensive hosted solution that improves the efficiency of manufacturing companies through real time analysis of machines' usability and energy consumption.

HUNT-R uses non-intrusive sensors to return data through a hosted Internet of Things (IoT) platform, using machine learning, visualisation and analytics to display the data in a dashboard that can be used to improve productivity-related decision making.

The core of the HUNT-R solution, the machine learning platform, also allows for a number of custom services and solutions that leverage data analysis and visualisation.

OBJECTIVES

To find resellers or solution providers that sell machinery and services to manufacturing companies, and to help these manufacturing companies implement the HUNT-R energy saving solution.

ABOUT US

LANTERN Technologies is a hardware and software development company that provides solutions that allow manufacturing companies to remotely monitor, analyse and optimize the performance of their machinery, leveraging cognitive computing, an Internet of Things (IoT) platform and data science.

OUR OFFER

LANTERN Technologies is the developer of HUNT-R, an IoT-based remote monitoring tool that helps manufacturing companies reduce energy costs and avoid mechanical failure on critical equipment.

The HUNT-R solution requires no intrusive technology or modifications to existing equipment. Rather, a sensor relays data to a cloud-based interface enabling companies to view operational data across devices in real time.

CLIENTS

Lantern builds solutions for companies that experience high energy consumption from their machinery and wish to control costs and optimize productivity. To date, Lantern has provided their IoT software solutions, integrated into IBM, SAP and Oracle systems to multinational companies and manufacturing companies in Costa Rica. Lantern solutions are often hosted on Rackspace, to optimize performance and accessibility.
